

Sajed Zarinpour Nashroudkoli

Curriculum Vitae

+98-935-218-8208 | sajed.zarinpour@gmail.com | <https://github.com/sajed-zarrinpour>

Summary

Backend developer with 8+ years of experience in designing and optimizing high-performance web applications. Skilled in PHP, MySQL, Go, PostgreSQL, Kafka, and Redis. Proven ability to deliver scalable web platforms with API integrations, and CI/CD pipelines with measurable performance gains.

Skills

PHP, Laravel, GraphQL, MySQL, Clickhouse, Symfony, PostgreSQL, Redis, Kafka, Linux, Docker, Swagger, PHPDoc, Git, CI/CD, Nginx, Go, NextJs, ReactJs, JavaScript (ES2021)

Experiences

Dec. 2025-Present

Backend Developer, *AustroByte*(Remote)

- Empowered users with fine grid control over complex events by developing an automatic feed generation system, resulted in:
 - a powerful panel to define custom event based feeds for various bussiness situations, cutting 80% of the need to watch for market changes manually
 - improved reaction time to changes in market by 5% by pushing fine tuned feeds through various notification channels
 - improved work experience via a flexible template engine to let user pack all the data needed to handle a market event in the generated feed report itself
 - introduced a cron based employee monitoring system to monitor inactive employees based on custom defined rules periodically, resulted in better task dispersion
 - implemented a powerful logical engine to evaluate if a complex events (events across multiple -not neccessarily related- models) meet certain conditions
- Maintained existing GraphQL Api for BOM upload in a tenant based system
- Improved query speed for Availabilities and Manufacturers using clickhouse
- Upgraded micro service based models to support custom notification channels, simplifying the process in 23 different usecases

Mar. 2025-Dec. 2025

System Designer / Backend Developer, *Zhikan*(Remote)

- Developed a complete Internet Pay Gate (IPG) system, processing 65K+ transactions per day
- Optimized payment pipeline using asynchronous message queues, caching, and connection pooling, achieving 100% data integrity and 1.2μs callback time on load tests
- Built a detailed CI/CD test suite for comprehensive payment cycle testing, allowing for the identification of bottlenecks that improved average response time by 25%, ultimately enhancing customer satisfaction and retention rates
- Spearheaded the design and implementation of a sharding strategy to isolate the 5 most demanding clients, improving system resilience, and cutting total system latency by at least 15%
- Architected merchant and admin API panels utilizing RESTful principles for streamlined data management and comprehensive reporting, optimizing data retrieval speeds by 30% across all user roles

Apr. 2024-Mar. 2025

System Designer/Web Developer, *Azad University Electronic Campus*(Onsite)

- Revamped authorization protocols and Moodle middlewares for the Vadana learning management system, decreasing server load by 30% during peak hours and supporting 3.6k concurrent users
- Upgraded and refactored AU ticketing system, improving its play time from 3.6s to 56ms by optimizing database queries, reducing API calls, and caching

|-----------------------|--|
| Dec. 2023-Mar. 2024 | Backend Developer, Motegharen(Remote) <ul style="list-style-type: none"> ▪ Developed an online learning management system, improving user experience, course discovery and content delivery which ultimately led to increasing student enrollment from 700 to 1.3K ▪ Conducted regular website updates and maintenance to ensure functionality and usability, reducing average downtime to 15 minutes monthly |
| Dec. 2020-Nov. 2021 | Database Analyst / Developer, Tavana System(Hybrid) <ul style="list-style-type: none"> ▪ Designed database schema for financial and warehousing modules of an ERP system, improving query speed by 7% ▪ Crafted a custom markdown for financial reporting system, helping users speeding up writing custom invoices by 50%, resulting in an increased accuracy and clarity of the user generated reports |
| Oct. 2016 - Dec. 2020 | Back End Developer, ZarrinSoft(Remote) <ul style="list-style-type: none"> ▪ Design a mathematical expression runtime and number partitioning program in C++ to showcase important programming concepts like data structures through a challenge to my team ▪ Developed and maintained a couple of monolithic applications using PHP and Laravel Framework ▪ Conducted regular website updates and maintenance to ensure functionality and usability |

Published Packages

- | | |
|------|---|
| 2024 | https://packagist.org/packages/sajed-zarinpour/meloquent
Microservice toolkit for eloquent |
| 2024 | https://packagist.org/packages/sajed-zarinpour/spotplayer
Laravel wrapper for spotplayer video service |
| 2024 | https://packagist.org/packages/sajed-zarinpour/db
Lightweight PHP database adaptor |

Education

- | | |
|---------------------|--|
| Sep. 2017-Oct. 2020 | M.Sc. in Applied Mathematics, Institute for Advanced Studies in Basic Sciences, Iran
<i>Numerical Method for Solving PDEs with Uncertainty Using Neural-Network</i> |
| Sep. 2012-Sep. 2017 | B.Sc. in Applied Mathematics, University of Guilan, Iran
<i>Study on GMDH Algorithm for Stock Price</i> |
